

Don't let your **workplace** be left behind!

By the end of the decade, there will be an estimated 850 million mobile workers across the world.

(Omni Consulting Group LLP and Cisco Systems Case study 2006)

HotButton Solutions ensures your company is on the fast track to success with the best system available for handheld field data capture.

HotButton Solutions is a unique software development company specializing in creating solutions to connect current PC based applications to handhelds. Founded by Jane Glendon, they are a proud Albertan corporation that is committed to providing their customers with reliable and innovative field data capture solutions.

While other companies produce products that advance field data collections using mobile devices, they only provide a partial solution. That's where HotButton is different. They offer a comprehensive handheld solution that's effective and efficient by using their ArrowSync™ technology. With ArrowSync™ HotButton has created its core product, Hot-Leap™, a handheld solution that can be used to collect data for multiple applications. More data means that decisions are made easier with the necessary information at hand.

HotButton Solutions respects their partnerships, forms strategic alliances and collectively strives to provide excellence in their work and solutions.

We don't go out of our way to check on our competition. We worry about our own business and doing it right. You don't have to stand on someone else's shoulders to look tall."

– Jane Glendon
President & CEO

Biography

Jane Glendon President & CEO founded HotButton Solutions in 2001. With over 30 years of sales and management experience, as well as 11 years in the Oil and Gas Industry, she is a respected member of the Calgary business community. Jane secured the original patents for the HotButton technology. HotButton has a strong presence in the software community with partners like CGI Canada, Petris (formerly Production Access) in Houston, and General Dynamics Canada.

Jane Glendon is an excellent example of a female entrepreneur becoming a successful leader without compromising the person she is, her belief system, and those who put their trust in her to create a successful business.

Make Money this New Year

CALGARY, AB - Can investing in technology make you more money this year?

In the oil and gas sector, the industry is struggling in the face of a strong loonie and increased royalty rates. It's now more important than ever for companies to stay ahead of their competition. Recent technological advances could be the key to significantly increasing a company's revenue while lowering the cost of operations.

HotLeap™ is revolutionary software that will give companies the competitive edge to increase revenue and drive down costs. This handheld software offers two-way data transfer between the field and multiple applications, saving companies time and money on travel, data entry, paper, and labour costs, since all transfers and calculations can be done directly from the site. It creates an automated system that provides data at the site where the field operators can make the best use of the data.

By simply changing the way operators input data and giving them a new toolset in the field, companies could see an increase in revenue. A per day optimization increase of 1% is substantial when looking at BOE production. What value does a growth in production mean for your company?

Created in 2000 by HotButton Solutions Inc. as a platform to extend traditional PC based applications to the field, HotLeap™ offers a number of solutions enabling companies to collect data in the field and then transfer it to the connected application immediately.

"Often users have the need to collect and analyze field data but are at a loss because there is no existing application that they deem appropriate for such a function. HotLeap™ is the solution that offers not only customized data capture, but also the ability to seamlessly transfer field data to multiple applications for analysis, even if the user wants to analyze their data with a simple Excel spreadsheet," explains Jane Glendon, founder, President, and CEO of HotButton Solutions Inc.

Already used in the oil and gas industry, HotLeap™ gathers information in the field and data is then synchronized through the Internet using one program regardless of the multiple applications, making the efficient transfer of field data possible and reliable. With HotLeap, companies will:

- Receive less data error
- Increase revenue
- Optimize their production by a minimum of 1%
- Have on-site problem solving

Make this the year your company increases its production!

HOTLEAP™: Provides the user with one all-encompassing solution for which all required data can be collected on a single user interface, regardless of the origin (PC based application, template, etc.) and destination of the data entry fields. The user has a single interface to collect data. There is no jumping between screens, closing one program down to start another, or switching of flash cards.

The appropriate information is filtered to the various PC based applications and/or a .CSV file. This capability opens up the possibilities for field data capture. Often users have the need to collect and analyze field data but are at a loss because there is no existing application appropriate for such a function. HotLeap™ offers the ability to seamlessly transfer field data to the end user for analysis; even if the user wants to use a simple Excel spreadsheet, HotLeap™ makes this possible.

The ability to combine multiple applications on one handheld unit using HotLeap™ has various benefits for the user:

- The purpose of using a handheld solution to collect data is to provide savings of both cost and time. Equipping a handheld with the ability to collect data for multiple applications increases a user's long term savings
- Increases the use of the handheld unit purchased for data collection thereby enhancing the cost/benefit relationship
- Provides seamless data capture using one medium of collection

Testimonials

“

HotButton has been working very hard to provide the handheld solution and has been very much appreciated”

– Cheryl Haworth, Production Analyst,
Devon Canada

“

HotButton has been found to far exceed expectations in comparison to the previously used application.”

– Jane Pratt, Manager
Information Systems, Energen Resources
Corporation

“

...In Arrowsync, Production Access and its customers have a unique data collections tool that will bring significant value for years to come.

– Tom Bandy, Former President,
Production Access (now Petris)
